CLIMATE PROTECTION

Industrial climate control technology for electrical enclosures and cabinets

Extreme weather and climate events are increasing throughout the world in frequency and severity. These events include extreme heat, extreme cold, drought, wildfires, tropical cyclones, floods, ice and snow storms. Unfortunately, these extreme events often lead to catastrophic losses including damage to property and infrastructure resulting in power and control systems outages, and communications network failures.

Although the weather and climate cannot be controlled, the climate within the electrical enclosure can be controlled. By controlling the enclosure climate within the ever-changing external climate, we are able to protect the contents of the enclosure to ensure that connected and networked infrastructure that it controls will safely continue to operate.

As experts in the field of climate protection of electrical enclosures and cabinets, IP Enclosures assists customers throughout the world in protecting critical infrastructure through harsh climates and extreme weather.

All IP Enclosures are built to precision to ensure consistent high quality standards.

Features & Specifications

IP Enclosures S1 range of steel electrical enclosures are suitable for general industrial applications.

Protection: IP66 IK10
(Independent accredited test laboratory)

Standard: IEC/EN62208, IEC/EN/AS60529, RoHS
(IEC/EN/AS61439 Compliant)

Material:

- Body: 1.2mm galvanised steel sheet (up to 700x500x250)
1.5mm galvanised steel sheet (800x600x200 and above)
- Gland Plate: 1.5mm galvanised steel sheet
- Door: 1.5mm galvanised steel sheet
- Device Mounting Plate: 1.5mm galvanised steel sheet
- Seal: Polyurethane.

Body: The robust monoblock body is fabricated using galvanised steel sheet (1.2mm-1.5mm). Flat face sealing surfaces are provided to increase seal life. Pre-fitted blind nutserts are incorporated to accommodate mounts and accessory fasteners to eliminate drilling and retain IP rating. Integral device plate mounts and M6 earth studs are provided. A galvanised steel gland plate is incorporated into the bottom face. Cutting, pressing and full continuous seam welding using precision automated manufacturing equipment ensures accuracy and consistent high quality.

Single Door: The robust surface mounted door is fabricated using 1.5mm galvanised steel sheet and incorporates concealed removable hinges with captive pins. The door is designed for a 110° opening. Each door contains cable management rails, an M6 earth stud and a high quality machine-applied foamed in place (FIP) Polyurethane seal. Two internal cable management rails can be removed to provide additional space for equipment, duct and door mounted control components.

Seal: A high quality machine-applied full perimeter UL listed Polyurethane seal foamed in place (FIP) provides excellent sealing over a long life. Temperature resistance -40°C to 80°C (160°C short term loading).

Lock: Chrome 5mm double bit insert quarter turn lock with key. A full range of locking options are available upon request.

Device Mounting Plate: The device mounting plate is fabricated using 1.5mm galvanised steel sheet, pressed to provide additional strength and supplied pre-fitted into the enclosure as standard.

Gland Plate: Gland plates incorporate a seal and are provided with fasteners. The size and quantity vary according to enclosure size. The gland plates are incorporated into the bottom face of the enclosure body, located towards the rear adjacent to the device plate for ease of cable management.

Surface Treatment: UL approved polyester powder coated with a smooth gloss finish, 80-120 micron average thickness, providing excellent exterior durability and colour retention.

Partitioned Electrical Enclosures

S1-P

Steel | Powder Coated

2 x SINGLE DOOR | IP66 IK10

Partitioned Electrical Enclosures are designed to house low voltage electrical equipment including switchgear and controlgear assemblies. They are based on our standard range but are provided in a range of various configurations to allow partitioning and separation of components into two separate IP rated compartments.

Features & Specifications

The range of standard partitioned electrical enclosures are rated for protection of each compartment up to IP66. They are powder-coated galvanised steel, suitable for heavy duty applications.

Protection: IP66 IK10 (Independent accredited test laboratory).

Standard: IEC/EN62208, IEC/EN/AS60529, RoHS, CE, UKCA

Material:

- Body: 1.2mm galvanised steel sheet
- Gland Plate: 1.5mm galvanised steel sheet
- Doors: 1.5mm galvanised steel sheet
- Device Mounting Plates: 1.5mm galvanised steel sheet
- Seals: Polyurethane

Enclosure Body: The robust monoblock body is fabricated using galvanised steel sheet (1.2mm-1.5mm) and consist of two separate fully sealed IP rated compartments. Flat face sealing surfaces are provided to increase seal life. Pre-fitted blind nutserts are incorporated to accommodate mounts and accessory fasteners to eliminate drilling and retain IP rating. Integral device plate mounts and M6 earth studs are provided. A galvanised steel gland plate is incorporated into the bottom face. Cutting, pressing and full continuous seam welding using precision automated manufacturing equipment ensures accuracy and consistent high quality.

Enclosure Doors: Two robust surface mounted doors are fabricated using 1.5mm galvanised steel sheet and incorporate concealed removable hinges with captive pins. The doors are designed for a 110° opening. Each door contains cable management rails, an M6 earth stud and a high quality machine-applied foamed in place (FIP) Polyurethane seal. The internal cable management rails can be removed to provide additional space for equipment, duct and door mounted control components.

Enclosure Seals: High quality machine-applied full perimeter UL listed Polyurethane foamed in place (FIP) seals provide excellent sealing over a long life. Temperature resistance -40°C to 80°C (160°C short term loading).

Enclosure Locks: Chrome 5mm double bit insert quarter turn locks with key. A full range of locking solutions are available upon request.

Device Mounting Plates: A device mounting plate is located in each separate compartment and is fabricated using 1.5mm galvanised steel sheet. They are pressed to provide strength and are pre-fitted into the enclosure as standard.

Gland Plate: Gland plates are incorporated into the bottom face of the enclosure for cable management. They are provided with gaskets and fasteners. The size and quantity vary according to enclosure size.

Surface Treatment: UL approved epoxy polyester powder-coated with a textured finish. 80-120 micron average thickness. The standard electrical enclosure colour is RAL7035. A full range of other colour options are available upon request. Refer to Electrical Enclosure Colours.

Rain Hoods I Wall Mounted

IP Enclosures provide a range of standard rain hoods for steel and stainless steel electrical enclosures. All IP Enclosures wall mounted electrical enclosures are manufactured with nutserts to accommodate rain hoods without drilling.

Rain hoods are used to prevent settling and building up of liquids, corrosive solids, minerals, dust, dirt and debris on top of an electrical enclosure. If corrosive liquids and solids settle and build up on top of an enclosure, the integrity of the coating and material may be compromised which may lead to corrosion and ingress of liquids and solids into the enclosure. Without maintenance, this may compromise internal electrical components and could increase risk of electric shock.

IP Enclosures rain hoods are easily fitted onto IP Enclosures electrical enclosures. All IP Enclosures electrical enclosures are manufactured with nutserts to accommodate optional rain hoods without drilling to ensure that the IP rating is maintained. Rain hoods are provided with fasteners.

Filter Vents & Fans

12VDC to 230VAC | 26m³/h to 700m³/h | IP54 (IP55 Optional)

IP Enclosures range of filter fans and vents feature a modern Italian grille design with minimal external projection. The front-opening grille allows filters to be easily maintained from the outside of the enclosure.

Features & Specifications

IP Enclosures provide a wide range of ventilation products for electrical enclosures. The front-opening grille allows filters to be easily maintained from the outside of the enclosure. All molded parts are made of highly resistant and self-extinguishing ABS. IP Enclosures ventilation products are manufactured to the highest quality in Italy.

Protection: IP54 (or IP55 if used with High Efficiency Filter Mat IP-VFXX or Vent Hood)

Conformity:  

Material: ABS UL94V-0 color RAL7035 (Optional Colour Black)

Flow Direction: Reversible

FEATURES

Modern Design: A positive visual impact is provided by the modern grille design and minimal external projection. All molded parts are made of highly resistant and self-extinguishing ABS, UL94 VO grade. The standard color is RAL7035.

Easy Maintenance: Filter mats can be easily maintained from outside of the enclosure due to the front-opening grille. Replacement of soiled filter mats takes only a few seconds without the use of tools.

Wide Range of Air Flow Ratings: 26m³/h to 700m³/h

Optimal Enclosure Protection: The special configuration of the grille, foam seal gasket and filter mat ensures an IP54 protection of the enclosure.

Quick Electrical Connection: Fitted with spring terminals for faster and safer wiring. Default terminal position is above the fan but can be easily changed to bottom of fan to suit wiring needs without tools.

Reversible Fan: Default air flow direction is from outside to inside of the enclosure. If required, air flow can be reversed due to quick release fan lock system without the use of tools.

Fast Installation: Installation is fast due to the simple square cutout on the enclosure and the snap-in fixing system. No fasteners are required.

Vent Hoods: To obtain IP55 protection, use in conjunction with IP Enclosures vent hoods. Hinged vent hoods are available to provide operator access to easily maintain filters from the outside of the enclosure.

Easy Maintenance due to Front Opening Grille

Step 1: Open Grille

Step 2: Remove Filter

Step 3: Insert Filter

Step 4: Close Grille

Thermal Control - Heat Exchangers

Air/Air Heat Exchangers

HEX

IP Enclosures heat exchangers are designed for the cooling needs of electrical cabinets. By utilising the heat exchange between two separate air flows through an aluminium pack, air/air heat exchangers allow heat to be dissipated inside electrical panels. They are recommended if the outside air has a lower temperature value than the inside air, a low cooling capacity is required, if the ambient air is excessively oily or dusty, or if the outside air and humidity cannot enter the cabinet.
